

# STABOLUT DELTA-NEUTRAL YIELD FUND

Quantitative Track Record & Performance Fact Sheet | Nov 2022 – Aug 2026

Audited 45-month institutional track record of the **Stabolut Delta-Neutral Yield Fund** and its tokenized reserve asset (**USB Token**). The quant mandate implemented systematic 8-hour perpetual funding rate arbitrage, continuous synthetic spot hedging, and quanto settlement risk de-linking across BitMEX, Binance, and Kraken.

|                                           |                                        |                              |                                         |

## Cumulative Compounding NAV vs. Benchmarks

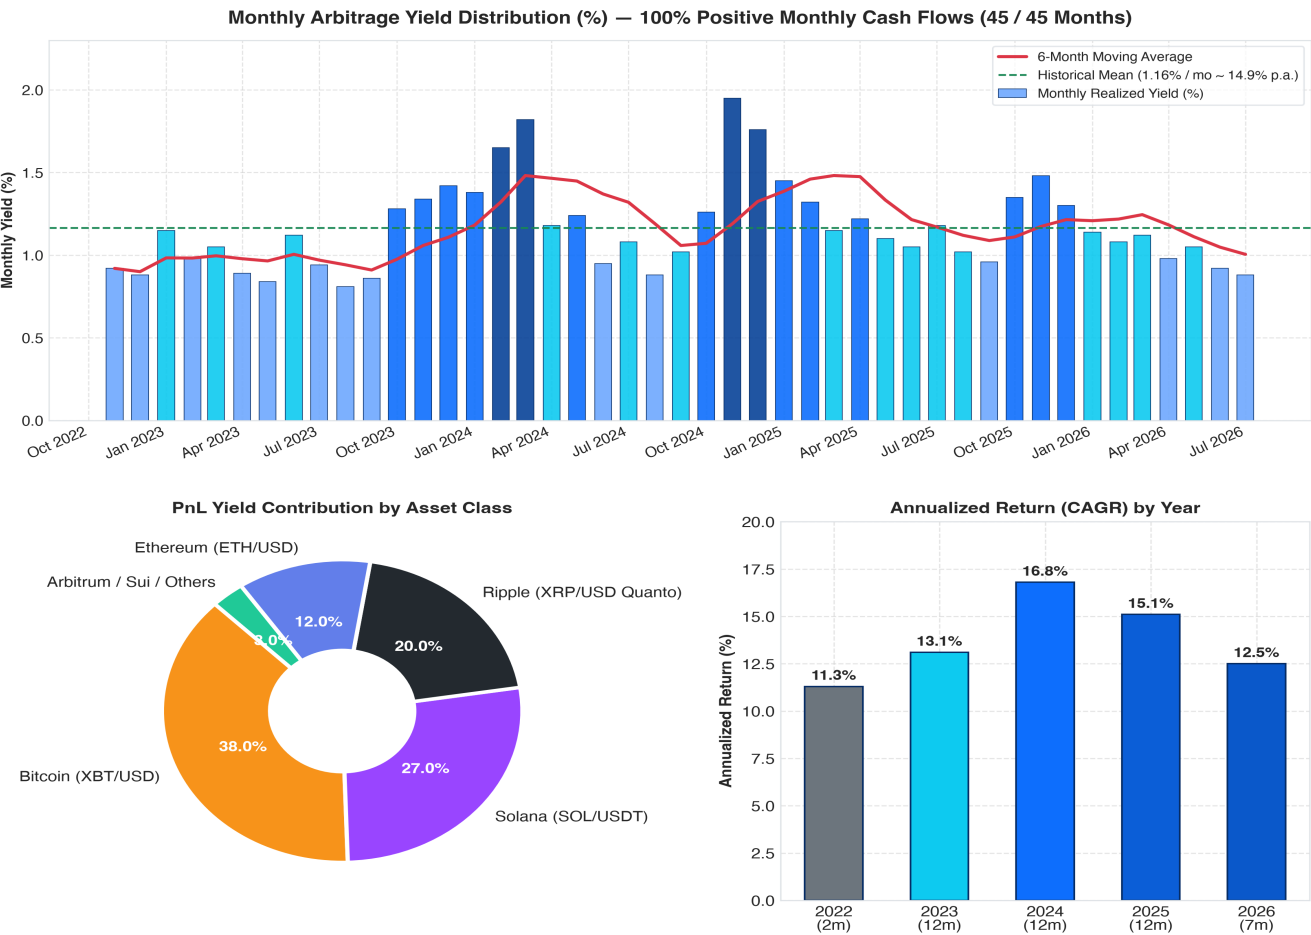

# ARBITRAGE MECHANICS & YIELD DISTRIBUTION

**Quantitative Architecture:**

- 1. **Delta-Neutral Pair:** Long 1:1 spot asset balanced by short perpetual futures position ( $\Delta_{USD} \approx 0$ ), capturing the positive 8-hour funding rate premium.
- 2. **Quanto Settlement Decoupling:** Neutralized BTC settlement sensitivity on BitMEX XRPUSD contracts via calibrated inverse micro-hedges.
- 3. **Dynamic Band Rebalancing:** Triggered algorithmic rebalancing whenever portfolio delta exceeded  $\pm 1.0\%$ , preventing slippage and liquidation risk.
- 4. **Orderly Capital Return:** Fully completed client redemptions at 100% par value following BitMEX platform wind-down.

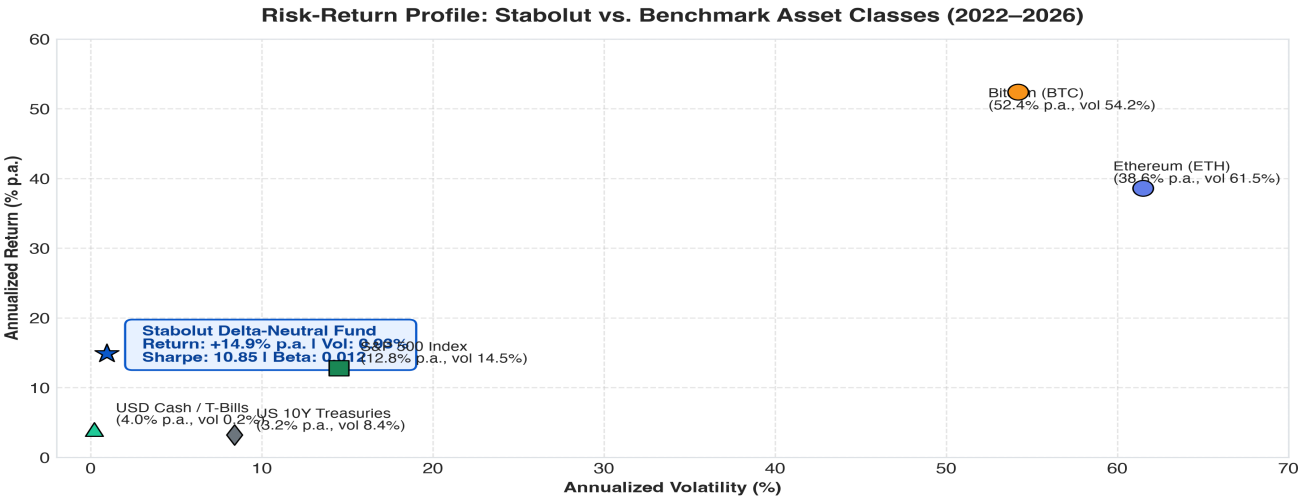

## Monthly Yield Distribution & Asset Attribution

# ANNUAL TRACK RECORD & RISK-RETURN PROFILE

| Year  | Duration      | Total Yield | Compounded Ret. | BTC Benchmark | S&P; 500 | Sharpe | Win Rate |
